CAREER OBJECTIVE

Motivated B.Tech CSE (AI) student at Amrita Vishwa Vidyapeetham with hands-on experience in Python, frontend development, and AI/ML applications. Strong foundation in Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, and SQL. Passionate about software development and building efficient, scalable applications while continuously learning new technologies.

EDUCATION

Amrita Vishwa Vidyapeetham, Amaravathi CGPA: 8.01	2023-present
Narayana Junior College, Guntur – Intermediate Grade: 96%	2021–2023
Katuri Public School, Guntur – Secondary School Grade: 98%	2020–2021

TECHNICAL SKILLS

Languages: Python, SQL, HTML, CSS, Java Script

CS Core: Data Structures & Algorithms, DBMS, Computer Networks, UX

ML/AI: Machine Learning

Soft Skills: Communication Skills ,Leadership , Time Management

WORK EXPEREINCE

Infosys Springboard Virtual Internship	Feb 2026 - Apr 2026
- Built the dashboard interface for a task management platform using Next.js and Tailwind CSS, integrating it with FastAPI backend REST APIs for secure, JWT-authenticated data handling. - Collaborated with a cross-functional team using Git/GitHub, following modular and scalable development practices.	

PROJECT EXPEREINCE

HireHelper Platform (Full Stack)	2026
- Built the dashboard interface using Next.js and Tailwind CSS, integrating backend REST APIs (FastAPI) for task management and status tracking, with JWT-authenticated requests for secure data fetching. - Collaborated with a team using Git/GitHub and Supabase (PostgreSQL), following modular, scalable backend development practices.	
Image Caption Generation (Deep Learning)	2025
- Developed an image captioning system using EfficientNetB0 as an encoder and a Transformer-based decoder for sequence generation. - Evaluated model performance using BLEU and METEOR metrics, generating human-like captions for diverse visual contexts.	
Self-Monitoring LLM for Hallucination Detection & Correction	2026
- Developed a Transformer-based framework to detect and correct hallucinations in Large Language Models using representation drift analysis, attention divergence, and uncertainty estimation. - Designed a confidence-scoring and self-correction pipeline using hidden state representations, improving response consistency and enabling continuous monitoring of LLM behavior.
